Hey Bob & Berts. We heard you were lookin’ an app?

We build restaurant apps, loyalty apps, reward apps, you name it...
We’ve even written articles on how to build restaurant apps.

Trust us, we know what we’re doing.

myth

Something like this?

How can we help.

Cross-Platform

All of the apps we build work on both iOS and Android and across all phone screen sizes to meet accessibility standards.

Custom Design

We're a custom development company. The app will feature a fully custom design that is unique to fit the Bob & Berts brand to maximise user experience and brand awareness with your customers.

Custom Loyalty

We'll create a digital loyalty card system in your app, where customers can effortlessly collect digital points or stamps, unlocking rewards like free items after a set number of purchases.

UX-Focussed

User experience is where we excel, we wrap strong user experience design with reliable development to create great digital products.

Notifications + Promotions

We'll allow you full control for real-time alerts on deals and loyalty specific offers. Allowing you to automate and manually personalise notifications for customers based on their loyalty tiers/scores.

Smart Wallet Integration

Linking the app with smart wallets for loyalty point usage and syncing up points/tiers. We'll integrate a loyalty QR for customers to easily collect points and redeem against product.

Epos Integrations

We've integrated with many Epos providers, we've also built a POS before, so we know what we're doing. Integrating with the Epos to push and pull orders, customer information and sync up loyalty are all things we've done in the past successfully.

Estimate costs.

Costs

We're transparent in everything we do, including costs. We quote and stand over that quote so there are never any hidden costs. In order for us to quote accurately, we'll need to have more discussions to fully understand your needs. For now, here are some example costs based on our experience.

Loyalty App

- ✓ Custom Design
- ✓ Custom Loyalty Programme
- ✓ iOS + Android
- ✓ Push Notifications
- ✓ Phone Wallet Integrations
- ✓ EPOS Integrations

£60-£80k

4-6 month timeline

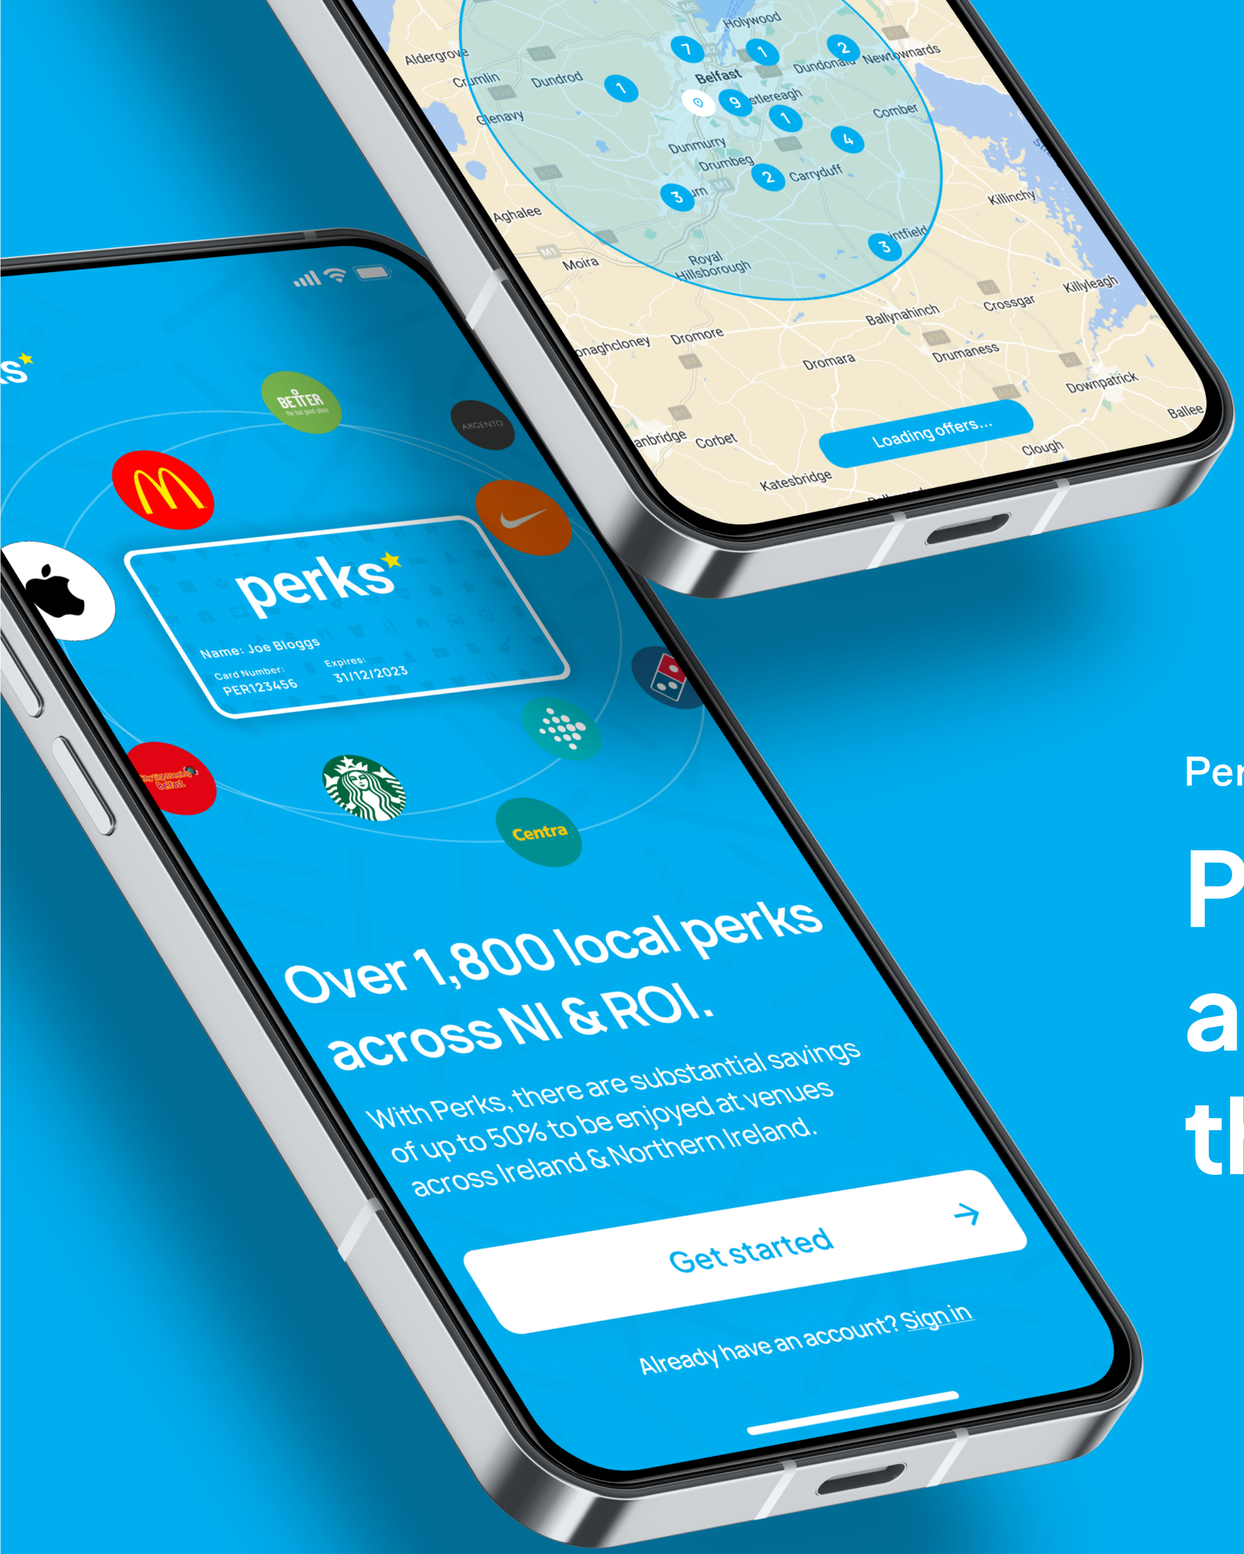

Why stop there?

There is lots more that we can work on together, we would see the loyalty app being the first mobile app engagement with your customers, further pushing updates and releases to engage with your customer base over time. This could be:

- Gamification for points collection
- Leaderboards and unlockables
- Mobile ordering and collection
- Personalisation
- Advanced customer reporting w/ notifications
- Location specific offers and promotions (based on customers geolocation data)
- Online store for merch

JuiceJar —

Driving efficiency and user experience in a busy chain of coffee and juice bars

Client
Juice Jar

Industry
Food & Technology

What we did
User Experience
Mobile App Development
Software Development

The Client

Juice Jar is a chain of local coffee and juice bars with branches across the UK with plans to open several more in the coming months. With a growing and frequently change staff team a challenge across their branches was managing the multiple sources orders were coming from: phone, in-store, Deliveroo, Uber Eats etc and ensuring staff were adequately trained to manage them all.

The Project

We worked with the team to build an internal system that would consolidate the orders into one dashboard to allow the staff in store to manage orders and the kitchen staff to process efficiently. With plans to scale quickly the business new the ordering process had to be manageable to allow staff to train quickly and provide a consistency of service across stores and customers regardless of their method of ordering. A great example of a business using technology to facilitate growth and manage growing pains, exactly the type of project and team with love partnering with.

Dish Dash Dine —

A fresh new concept for mobile food ordering for rural communities

Client
Dish Dash Dine

Industry
Food & Technology

What we did
User Experience
Mobile App Development
Software Development

The Client

DishDashDine is a mobile ordering startup in the UK and Ireland that aims to solve a gap in the food delivery market for rural communities. Its purpose is to provide an Uber Eats/Deliveroo experience for a fraction of the cost for smaller restaurants and suppliers in rural areas.

The Project

Dish Dash Dine approached Myth with big ambitions to take on Uber, Just Eat and Deliveroo with a concept that they had already tested and proven. We partnered with the startup to taking their no-code demo to design and develop a completely new mobile app from the ground up, with a key focus on the consumer user experience and the restaurant owner.
